

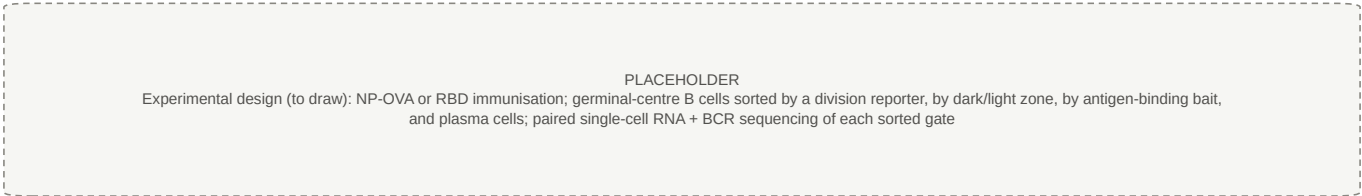

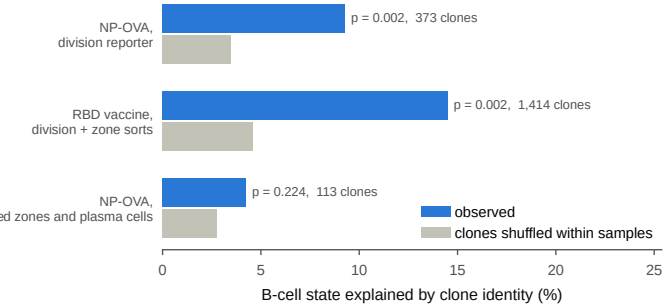

Figure 2 | Germinal-centre clones differ along a continuum of selection

Model-antigen immunisation: NP-OVA and an RBD vaccine, with cells sorted by what they had been doing.

d

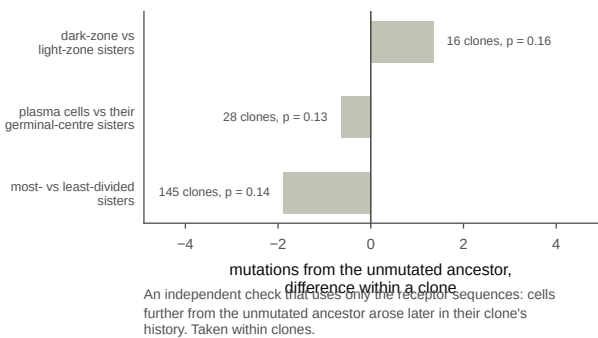

e

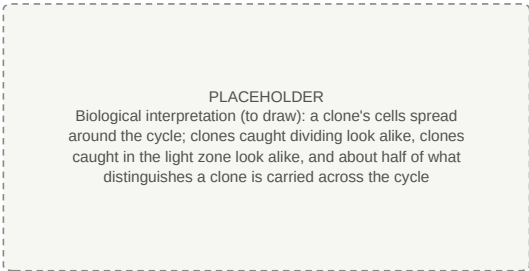

dashed outline: the same label shuffled among clones of the same mouse; grey: not significant

f

An independent check that uses only the receptor sequences: cells further from the unmutated ancestor arose later in their clone's history. Taken within clones.
