

Supplementary Figure 14 | Receptor identity and expression across additional B-cell systems

Pure marrow/blood gates, exact receptor identity and additional B-cell datasets test the same framework.

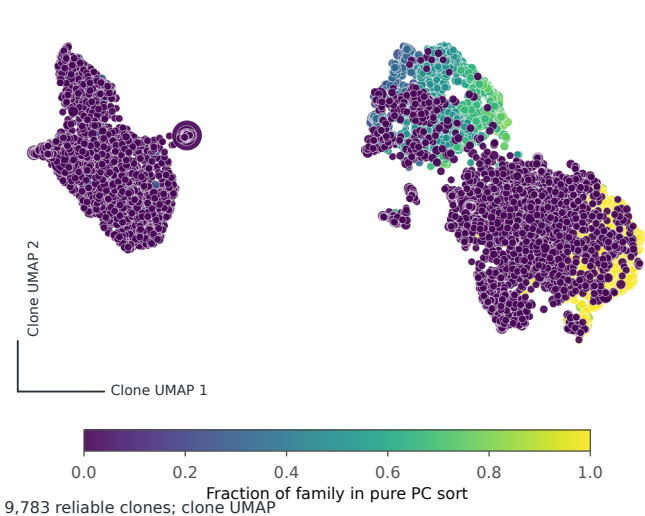

A Marrow/blood validation and five additional datasets

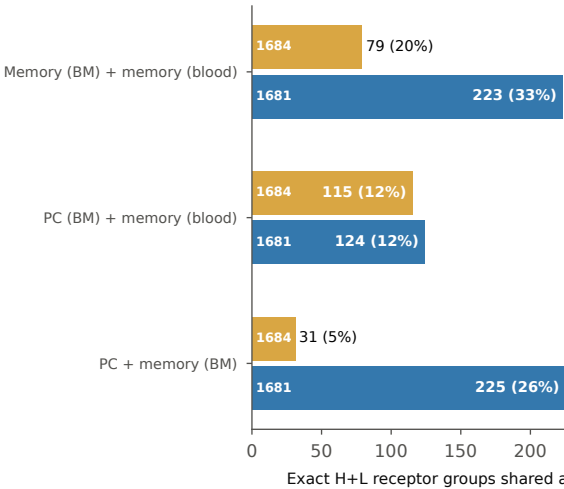

B Marrow/blood cells by measured sort gate

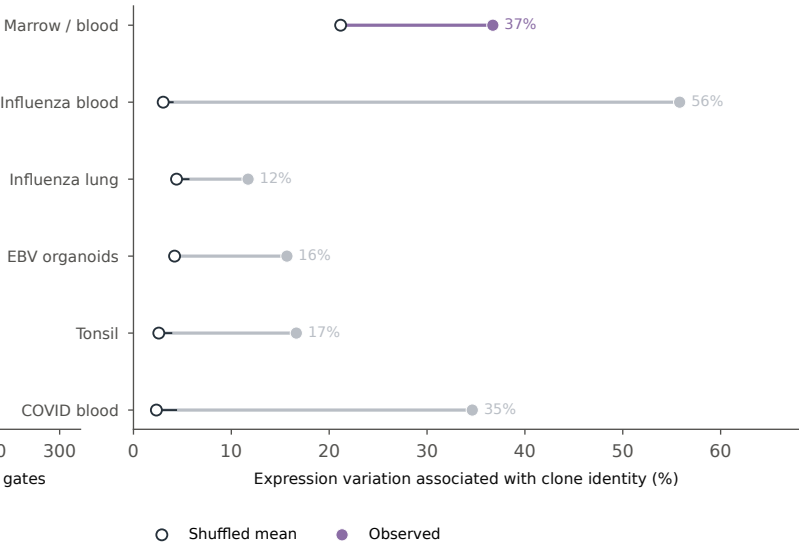

C Families by plasma-cell capture

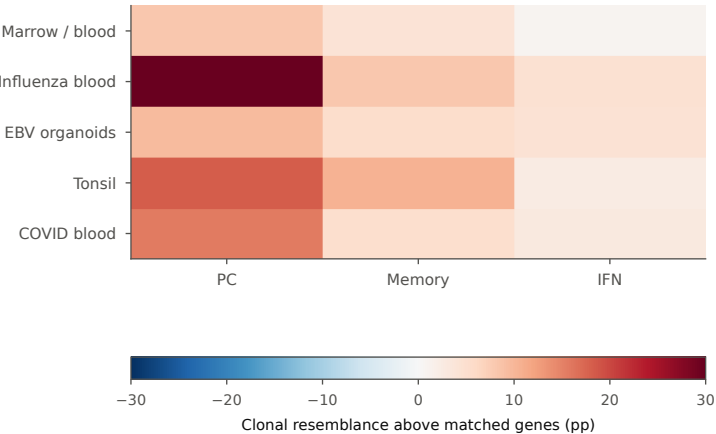

D Identical H+L receptors across pure gates

E Clonal expression signal exceeds the library baseline

F Gene modules show clone-associated expression

G EBV organoids: measured GFP status
