
Plasmodium infection, days 10-42 (GSE286215 exp. 2)
GC clock 0.101 %/day
GC B cells (switched)
output cells
V-region mutation (%)
day
92 clones: output lower in 65, higher in 8
same clone's output cells (%)
clone's GC cells (% mutation)
day
median -3.7 days (axis clipped at ±60)
clones
output lag behind own GC (days)
Plasmodium infection, days 0-14 (GSE286215 exp. 1)
GC clock -0.091 %/day
GC B cells (switched)
output cells
V-region mutation (%)
day
9 clones: output lower in 4, higher in 1
same clone's output cells (%)
clone's GC cells (% mutation)
day
Human lymph node after mRNA vaccination (GSE195673)
GC clock 0.023 %/day
GC B cells (switched)
output cells
V-region mutation (%)
day
2564 clones: output lower in 1536, higher in 821
same clone's output cells (%)
clone's GC cells (% mutation)
day
median -8.1 days (axis clipped at ±60)
clones
output lag behind own GC (days)
